Dr. L.L. Cavalli-Sforza
18, Via Fatebenesorella
Milan, Italy

Dear Luca:

In the course of some correspondence with Peter Sneath I was just reminded about the question whether there is any metabolic difference between F+ and F- cells or whether there is any obvious metabolic correlation with mating. I think you had told me that Girolami had made some findings along these lines, but I do not remember having heard any more about it. Could you let me know the details?

As ever,

Joshua Lederberg
